

Question - 1

You have a shoe-selling e-commerce platform. Now, the client wants to implement a new feature "Search". During the client meeting, they mentioned they wanted to make the search dynamic, with any keywords, or specific text. Now you have a chance to get into more details on the feature. You can ask 10 questions to the client. List the questions according to priority.

Answer- Here are the 10 questions I will ask to the client, the questions are listed according to priority.

1. What attributes should the search cover?
2. Should the search show only exact matches or also display relevant/partial matches?
3. What should happen when no results are found?
4. Should users be able to filter and sort the search results?
5. Do you have any response time limit within which the search results should appear?
6. Should the search bar show real-time suggestions or autocomplete results while typing?
7. Should we include auto-correction for misspelled words in the search bar?
8. Should users be able to search in multiple languages, and if so, should it handle translations?
9. Should the search feature show previous search terms or history?
10. Are special characters allowed in the search?
